Regular Reports of Information Processing Office
定期報告

## 2. Regular Reports（定期報告）

① Detection Status of Computer Virus under new system
（新システムでのコンピュータウィルス検出状況）

In June 2011, There are many detection in the PC of Bangkok Liaison Office (53 detections). Most of the detection is "INF/Autorun" virus (45 detection). This virus tries to expand own system to other PCs through the external media, such as USB memory, HDD and memory card with digital camera. Of course, it could be detected by our security software at the PC. However, at least, please check about the following easy protection for preventing the external media from the computer virus.

- Create **"Autorun.inf" folder** on the top of external media.
 * **Reference: http://www.cseas.kyoto-u.ac.jp/info/security/**
