２．Regular Reports（定期報告）

① Detection Status of Computer Virus（コンピュータウィルス検出状況）

Most computer virus in January 2014 was a variant of "Win32/Bundled.Toolbar.Ask". This is not computer virus, but it may inflict and act as malicious threat in the computer system. Therefore, it is detected as a potentially unwanted program by most anti-virus software.
They have been trying to infect with your PCs through easy routes, such as USB memory, HDD, and so on. Of course, the Center's security software has been detecting them. However, at least, **PLEASE look over the following information.**

    1. **Create "Autorun.inf" folder on the top of removable media.**
       http://www.cseas.kyoto-u.ac.jp/info/security/ (in English and Japanese)
    2. **Update of the computer security**
       http://www.csaes.kyoto-u.ac.jp/info/en/2012/01/3118

* "Auto-Detection" is the number of a malware which can be detected by our anti-virus software.
  [Auto-Detention Total]: 5,955 (since August 2009), 2,225 (FY2013)
