Malicious Detection Report

マルウェア検出報告

May 28, 2015 Editor: Kitani

Most computer virus in April 2015 was a variant of "Win32/Dorkbot.D". It produces large amounts of outgoing traffic, such as sending out spam, attacking to other computers, and sending out traffic attack (priority target is United States), by using infected computers (malware type is warm). Please note that a PC owner might become a victimizer! Moreover, it blocks the activity of the famous anti-virus software and make up the back door for breaking into the PC again. ESET provides the special clean up utility. If you worry, you use it or please contact us.

[PLEASE pay attention about Prevention Measure]

The information security risks (including the information leak) exist in various routes. The Center's security software has been detecting most of them, but it cannot be perfect even if the highest technology and the enough cost are used. Finally, the crisis awareness of PC users is required.

At least, PLEASE check the following prevention measures.

- 1. Create "Autorun.inf" folder on the top of removable media.
- 2. Update of the computer security

Please see http://www.cseas.kyoto-u.ac.jp/info/security (in English and Japanese)

^{* &}quot;Auto-Detection" is the number of a malware which can be detected by our anti-virus software.

[Auto-Detention Total]: 10,603 (since August 2009)

FY	FY2009	FY2010	FY2011	FY2012	FY2013	FY2014	FY2015
Total	607	993	1,132	998	2,598	4,275	197
AVG(day)	1.67	2.72	3.10	2.73	7.12	11.71	6.57

[Status Report of detection computer virus in April 2015] * 197 computer viruses were detected among 25 PCs.
