 (Web system error)
└ mysql_error_log.err
 (Database error)

Notice

MAMP involves server functions

The web sites can see from other PCs in same network, such as public network (Free Wi-Fi).

Please pay attention about the place when you start up MAMP.
You had better block the access to web sites on MAMP from other PCs using FIREWALL software or FIREWALL function in the OS.

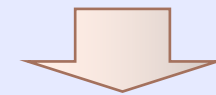

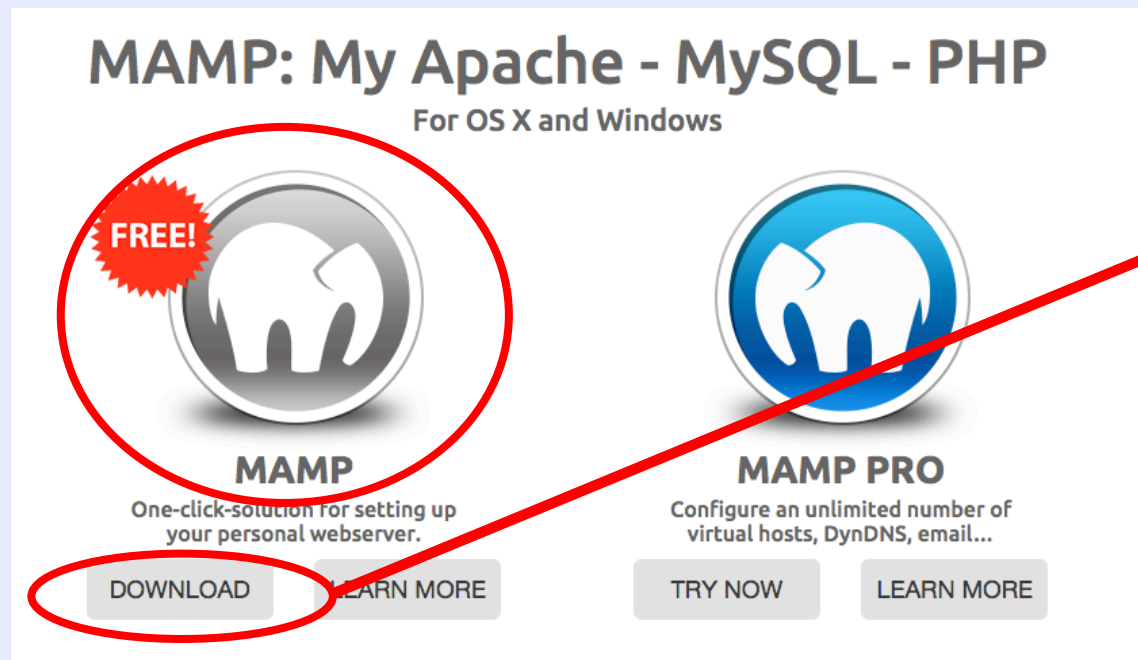

How to install MAMP

- MacOSX -

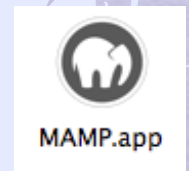

1. Download & Installation
2. Start up MAMP
3. Setting up of the DB
4. Access to the DB

4. Setting up of the DB
5. Access to the DB

1. Download & Installation

1. Access to <http://www.mamp.info/en/> .

2. Download this software.

Firstly, Installation time takes for about 30 minutes.
-- Microsoft Visual C ++ installation is too slow.

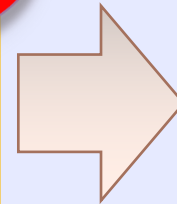

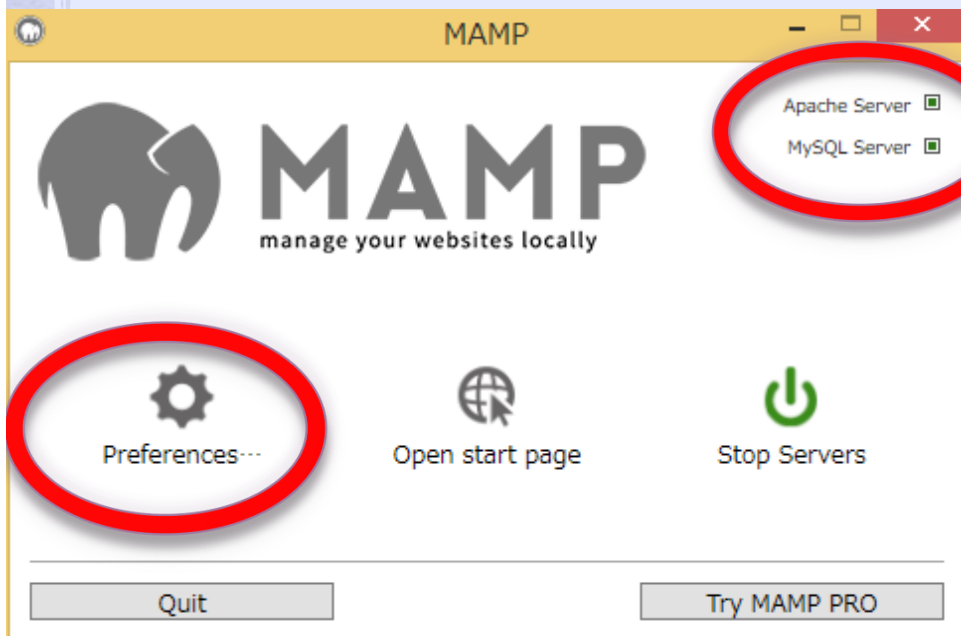

C:\MAMP

Installation time takes for **about 30 minutes** because Microsoft Visual C++ runtime is installed.

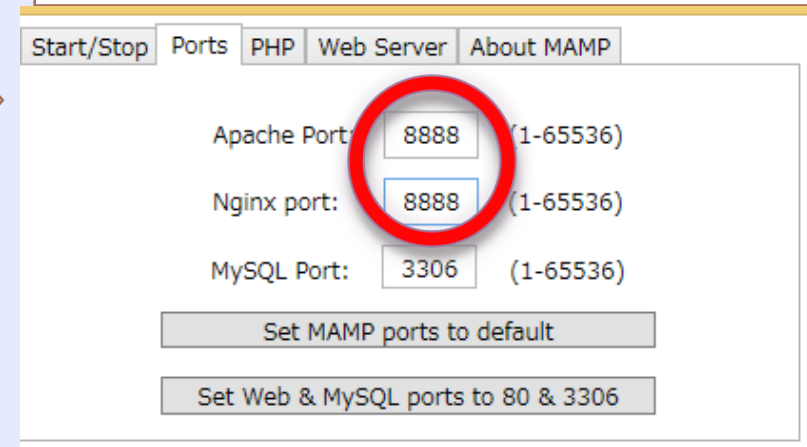

(2/5) Customize Preferences

1. Open “MAMP” shortcut.
 - ◆ “C” Drive → MAMP.
2. Automatically Run Web servers.
3. Click on “Preferences” button and change the Apache & Nginx port to 8888 in Ports tab.

Preferences

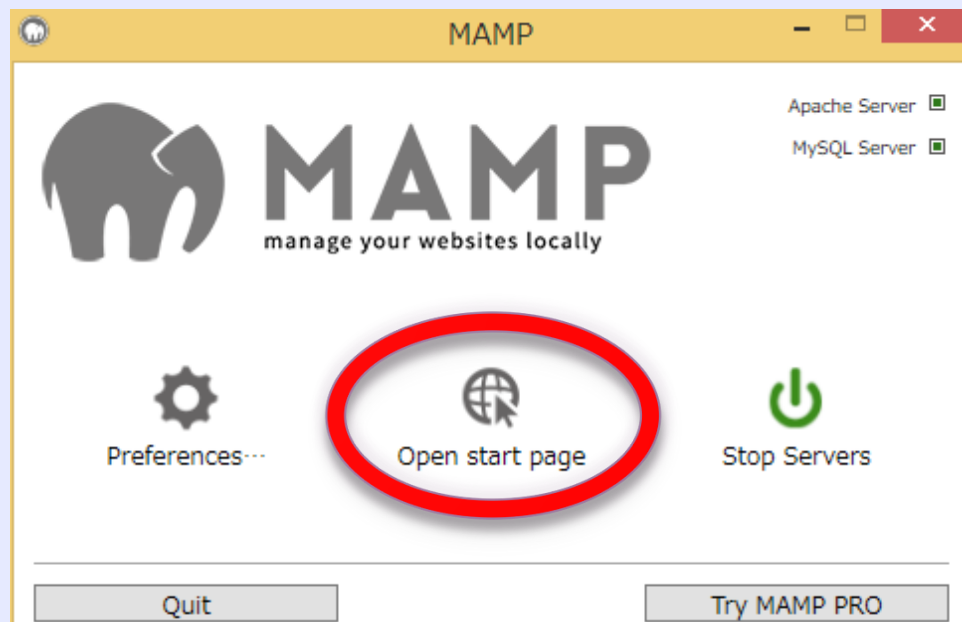

Apache Port : 80 → 8888
Nginx port : 80 → 8888

Please avoid Port 80 for conflicting other software, such as Skype.

2. Start up MAMP

1. Open MAMP and click on “Open start page”.
 - ◆ “C” Drive → MAMP.
2. Click on “Open start page”.
3. If “Welcome!” message is displayed, the installation is successful!

Web Browser

<http://localhost:8888/MAMP>

Welcome!
MAMP has been installed
successfully.

Installation is successful!
