## 2. Regular Reports (定期報告)

### ① Detection Status of Computer Virus (コンピュータウイルス検出状況)

In June 2012, there were a lot of false detections (74 items among 132 detections) regarding DELL backup system. This issue was already fixed by adjusting CSEAS security management system. Then, most actual detected computer virus (45.6%) except the false detection was viruses of external medias using "Autorun".

\* Therefore, at least, **PLEASE look over the following information.**

1. **Create "Autorun.inf" folder on the top of removable media.**

<http://www.cseas.kyoto-u.ac.jp/info/security/> (in English and Japanese)

2. **Update of the computer security system**

<http://www.csaes.kyoto-u.ac.jp/info/en>

**"Recommendation of PC Security Check" in the Column. (in English and Japanese)**

\* "Auto-Detection" is the number of a malware which can be detected by our anti-virus software.  
**[Auto-Detection Total]: 3,002 (since August 2009), 1,402 (FY2012)**

\* "Discovery" is the number of cases for the infected malware or false detection discovered by us.  
 - In most of cases, it is the newly-discovered computer virus which cannot be detected by anti-virus software.  
**[Discovery Total]: 14 (since August 2009), 3 (FY2010), 0 (FY2011)**

\* "Incident" is the number of cases of the message from external organizations, such as other departments, the network center, or the police.  
**[Incident Total]: 3 (since August 2009), 0 (FY2010-2011), 0 (FY2012)**

### [Status Report of detection computer virus in June 2012]

\* 132 computer viruses were detected among 17 PCs.
