2．Regular Reports（定期報告）

① **Detection Status of Computer Virus**（コンピュータウィルス検出状況）

In July and August 2012, the top detected computer virus is a variant of "W32/HiddenStart.A".This virus is called "Riskware". Riskware is a generic name for the software which includes a certain security risk. For example, when you access to a web site, you may encounter, "Attention! Your PC may be infected with computer virus. Please check it by using this scanning tool.". And then, if you install and run the tool, it may mislead to purchase their software or other software by using the fake information. Of course, the Center's security software has been detecting them. However, at least, **PLEASE look over the following information.**

1. **Create "Autorun.inf" folder on the top of removable media.**
   http://www.cseas.kyoto-u.ac.jp/info/security/ (in English and Japanese)
2. **Update of the computer security system**
   http://www.csaes.kyoto-u.ac.jp/info/en
   "Recommendation of PC Security Check" in the Column. (in English and Japanese)
* "Auto-Detection" is the number of a malware which can be detected by our anti-virus software.
[Auto-Detention Total]: 3,090 (since August 2009), 1,490 (FY2012)

* "Discovery" is the number of cases for the infected malware or false detection discovered by us.
- In most of cases, it is the newly-discovered computer virus which cannot be detected by anti-virus software.
[Discovery Total]: 14 (since August 2009), 3 (FY2010), 0 (FY2011)

* "Incident" is the number of cases of the message from external organizations, such as other departments, the network center, or the police.
[Incident Total]: 3 (since August 2009) , 0 (FY2010-2011) , 0 (FY2012)

[Status Report of detection computer virus in July and August 2012]
* 88 computer viruses were detected among 19 PCs.
