

Regular Reports of Information Processing Office

定期報告

October 25, 2012 Editor: Kitani

2. Regular Reports (定期報告)

① Detection Status of Computer Virus (コンピュータウイルス検出状況)

In September 2012, the top detected computer virus is a variant of “HTML/iframe.B.Gen”. This name is the universal name regarding malicious “iframe” tag. This virus forcibly tries to redirect to a malicious web site. As a result, the PC may be infected with a computer virus when it only accesses to the site. Of course, the Center’s security software has been detecting them. However, at least, **PLEASE look over the following information.**

1. Create "Autorun.inf" folder on the top of removable media.
<http://www.cseas.kyoto-u.ac.jp/info/security/> (in English and Japanese)
2. Update of the computer security system
