

Regular Reports of Information Processing Office

定期報告

March 28, 2013 Editor: Kitani

2. Regular Reports (定期報告)

① Detection Status of Computer Virus (コンピュータウイルス検出状況)

Most computer virus in February 2013 was a variant of “Win32/Toolbar.SearchSuite”. This virus artfully hides in free software and the activity is to get the private information for Phishing or the advertising revenue.

They have been trying to infect with your PCs through easy routes, such as USB memory, HDD, and so on. Of course, the Center’s security software has been detecting them. However, at least, **PLEASE look over the following information.**

1. Create "Autorun.inf" folder on the top of removable media.

<http://www.cseas.kyoto-u.ac.jp/info/security/> (in English and Japanese)

2. Update of the computer security

<http://www.csaes.kyoto-u.ac.jp/info/en/2012/01/3118>

* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.

[Auto-Detection Total]: 3,611 (since August 2009), 2,011 (FY2012)
