

# Regular Reports of Information Processing Office

## 定期報告

March 26, 2014 Editor: Kitani

## 2. Regular Reports (定期報告)

### ① Detection Status of Computer Virus (コンピュータウイルス検出状況)

Most computer virus in March 2014 was a variant of “PHP/Obfuscated.F”. This is potentially unwanted application (not computer virus). It means that the PC security software (ESET) detected it and blocked the access when the PC accessed to the hacked web site.

The information security risks (including the information leak) exist in various routes. The Center’s security software has been detecting most of them, but it cannot be perfect even if the highest technology and the enough cost is used. Finally, the crisis awareness of PC users is required.

At least, **PLEASE look over the following information.**

#### 1. Create "Autorun.inf" folder on the top of removable media.

<http://www.cseas.kyoto-u.ac.jp/info/security/> (in English and Japanese)

#### 2. Update of the computer security

<http://www.cseas.kyoto-u.ac.jp/info/security/pc> (in English and Japanese)

\* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.  
 [Auto-Detection Total]: 6,328 (since August 2009), 2,598 (FY2013)

\* “Discovery” is the number of cases for the infected malware or false detection discovered by us.  
 - In most of cases, it is the newly-discovered computer virus which cannot be detected by anti-virus software.  
 [Discovery Total]: 14 (since August 2009), 3 (FY2010), 0 (FY2011-2012), 4 (FY2013)

\* “Incident” is the number of cases of the message from external organizations, such as other departments, the network center, or the police.  
 [Incident Total]: 3 (since August 2009), 0 (FY2010-2013)

### [Status Report of detection computer virus in March 2014]

\* 262 computer viruses were detected among 27 PCs.
