

# Regular Reports of Information Processing Office

## 定期報告

May 29, 2014 Editor: Kitani

## 2. Regular Reports (定期報告)

### ① Detection Status of Computer Virus (コンピュータウイルス検出状況)

Most computer virus in April 2014 was a variant of "OSX/Adware.Genieo.A". This is a malware for MacOS! This is potentially unwanted application for a commercial use. The application may involve the spy operation without the user agreement. Therefore, most of security software detects as the risky application.

#### [PLEASE pay attention about Prevention Measure]

The information security risks (including the information leak) exist in various routes. The Center's security software has been detecting risks most of them, but it cannot be perfect even if the highest technology and the enough cost are used. Finally, the crisis awareness of PC users is required.

At least, **PLEASE check the following prevention measures.**

#### 1. Create "Autorun.inf" folder on the top of removable media.

<http://www.cseas.kyoto-u.ac.jp/info/security/> (in English and Japanese)

#### 2. Update of the computer security

<http://www.cseas.kyoto-u.ac.jp/info/security/pc> (in English and Japanese)

\* "Auto-Detection" is the number of a malware which can be detected by our anti-virus software.  
**[Auto-Detection Total]: 6,517 (since August 2009), 2,598 (FY2013), 189 (FY2014)**

\* "Discovery" is the number of cases for the infected malware or false detection discovered by us.  
 - In most of cases, it is the newly-discovered computer virus which cannot be detected by anti-virus software.  
**[Discovery Total]: 14 (since August 2009), 3 (FY2010), 0 (FY2011-2012), 4 (FY2013), 1 (FY2014)**

\* "Incident" is the number of cases of the message from external organizations, such as other departments, the network center, or the police.  
**[Incident Total]: 3 (since August 2009), 0 (FY2010-2014)**

### [Status Report of detection computer virus in April 2014]

\* 189 computer viruses were detected among 28 PCs.
