

Malicious Detection Report

マルウェア検出報告

October 23, 2014 Editor: Kitani

Most detected malware during 06-09/2014 was a variant of “Win32/InstallCore.QC”. According to some web information, this is a broad category of malicious software that can include adware, spyware, viruses, and so on. All of these software are designed to avoid the computer security and force unwanted system behavior, damage (including information leak).

[PLEASE pay attention about Prevention Measure]

The information security risks (including the information leak) exist in various routes. The Center’s security software has been detecting most of them, but it cannot be perfect even if the highest technology and the enough cost are used. Finally, the crisis awareness of PC users is required.

At least, **PLEASE check the following prevention measures.**

1. Create "Autorun.inf" folder on the top of removable media.
2. Update of the computer security

Please see <http://www.cseas.kyoto-u.ac.jp/info/security> (in English and Japanese)

* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.

[Auto-Detection Total]: 8,080 (since August 2009)

FY2009	FY2010	FY2011	FY2012	FY2013	FY2014
607	993	1,132	998	2,598	1,752

[Status Report of detection computer virus in 06-09/2014 <4 months>]

* 1,350 computer viruses were detected among 95 PCs.
