

Malicious Detection Report

マルウェア検出報告

June 25, 2015 Editor: Kitani

Most computer virus in May 2015 was a variant of “Win32/Spy Zbot.ABV”. The category is a trojan horse. It makes up the back door for breaking into the PC. Because an attacker may need to get many manipulated computers (bots) for attacking to a target system. Please note that a PC owner might become a victimizer! Of course, the detected computers virus were blocked by the Center’s security software, but please contact us if you worry.

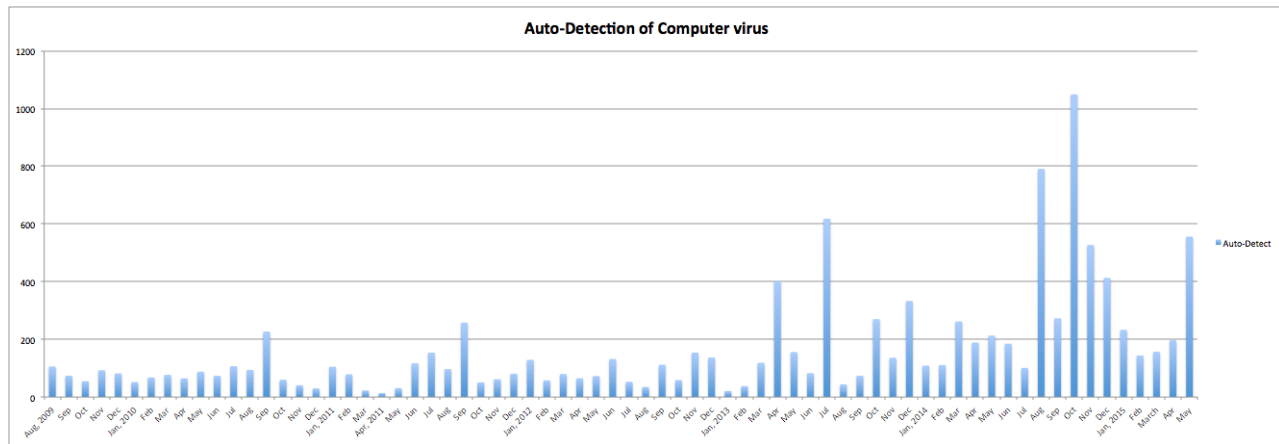

[PLEASE pay attention about Prevention Measure]

The information security risks (including the information leak) exist in various routes. The Center’s security software has been detecting most of them, but it cannot be perfect even if the highest technology and the enough cost are used. Finally, the crisis awareness of PC users is required.

At least, **PLEASE check the following prevention measures.**

1. Create "Autorun.inf" folder on the top of removable media.
2. Update of the computer security

Please see <http://www.cseas.kyoto-u.ac.jp/info/security> (in English and Japanese)

* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.

[Auto-Detection Total]: 10,603 (since August 2009)

FY	FY2009	FY2010	FY2011	FY2012	FY2013	FY2014	FY2015
Total	607	993	1,132	998	2,598	4,275	753
AVG(day)	1.67	2.72	3.10	2.73	7.12	11.71	12.34

[Status Report of detection computer virus in May 2015]

* 556 computer viruses were detected among 22 PCs.
