

# Malicious Detection Report

## マルウェア検出報告

September 24, 2015 Editor: Kitani

Most malicious software in July/August 2015 was a variant of “Win32/UltraReach”. This is not computer virus, but it may inflict and act as malicious threat in the computer system. Therefore, it is detected as a potentially unwanted program by most anti-virus software. Of course, it’s blocked by the Center’s security software, but please contact us if you worry.

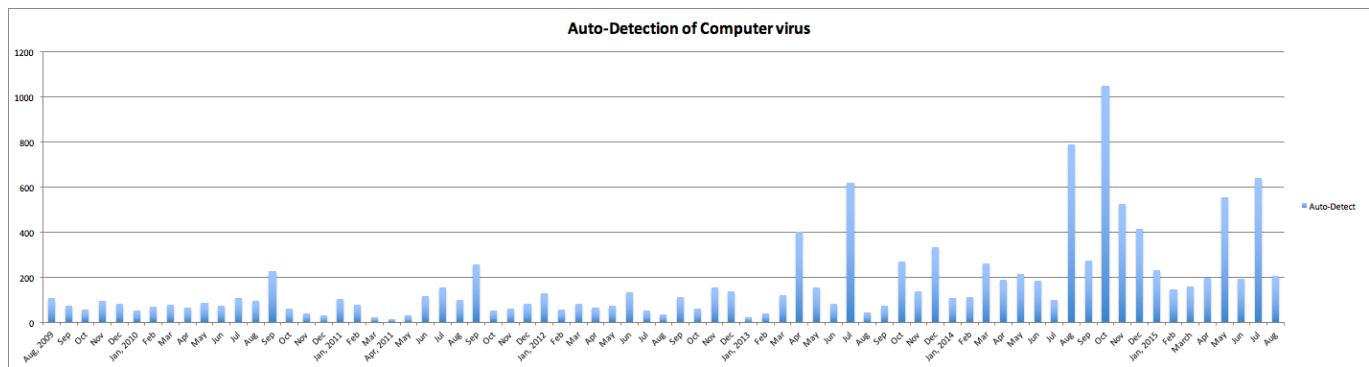

### [PLEASE pay attention about Prevention Measure]

The information security risks (including the information leak) exist in various routes. The Center’s security software has been detecting most of them, but it cannot be perfect even if the highest technology and the enough cost are used. Finally, the crisis awareness of PC users is required.

At least, **PLEASE check the following prevention measures.**

1. Create "Autorun.inf" folder on the top of removable media.
2. Update of the computer security

Please see <http://www.cseas.kyoto-u.ac.jp/info/security> (in English and Japanese)

\* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.

[Auto-Detection Total]: 12,394 (since August 2009)

FY	FY2009	FY2010	FY2011	FY2012	FY2013	FY2014	FY2015
Total	607	993	1,132	998	2,598	4,275	1791
AVG(day)	1.67	2.72	3.10	2.73	7.12	11.71	19.7

### [Status Report of detection computer virus in July/August 2015]

\* 876 computer viruses were detected among 36 PCs.
