

Malicious Detection Report

マルウェア検出報告

March 24, 2016 Editor: Kitani

Most malicious software in February 2016 was “JS/ScrInject.B” This type is false detection, including “HTML/Refresh.BC”. Then, fourth “KS/Toolbar.Crossrider.H” is not virus, but it’s a potentially unwanted software. If it infected with a PC, it may do a browser hijacking, a creation of backdoor, or other unclear activities. Of course, it’s blocked by the Center’s security software, but please contact us if you worry.

[PLEASE pay attention about Prevention Measure]

The information security risks (including the information leak) exist in various routes. The Center’s security software has been detecting most of them, but it cannot be perfect even if the highest technology and the enough cost are used. Finally, the crisis awareness of PC users is required.

At least, **PLEASE check the following prevention measures.**

1. **Create "Autorun.inf" folder on the top of removable media.**
2. **Update of the computer security**

Please see <http://www.cseas.kyoto-u.ac.jp/info/security> (in English and Japanese)
