

# Malicious Detection Report

## マルウェア検出報告

April 28, 2016 Editor: Kitani

Most computer virus in March 2016 was a variant of “Win32/Bundled.Toolbar.Ask.G”. This is the toolbar software for a web browser, but it’s potentially unwanted application (not computer virus) because it tries to install to a PC without the user’s acceptance. Of course, in case of installing by yourself for your research activity, there is no problem.

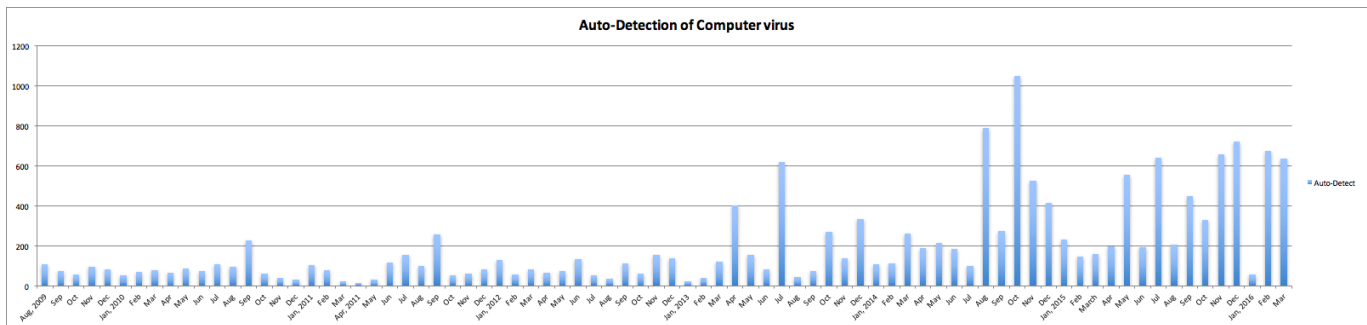

### [PLEASE pay attention about Prevention Measure]

The information security risks (including the information leak) exist in various routes. The Center’s security software has been detecting most of them, but it cannot be perfect even if the highest technology and the enough cost are used. Finally, the crisis awareness of PC users is required.

At least, **PLEASE check the following prevention measures.**

1. Create "Autorun.inf" folder on the top of removable media.
2. Update of the computer security

Please see <http://www.cseas.kyoto-u.ac.jp/info/security> (in English and Japanese)

\* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.

**[Auto-Detection Total]: 10,603 (since August 2009)**

| FY       | FY2009 | FY2010 | FY2011 | FY2012 | FY2013 | FY2014 | FY2015 |
|----------|--------|--------|--------|--------|--------|--------|--------|
| Total    | 607    | 993    | 1,132  | 998    | 2,598  | 4,275  | 5,315  |
| AVG(day) | 1.67   | 2.72   | 3.10   | 2.73   | 7.12   | 15.83  | 58.4   |

### [Status Report of detection computer virus in March 2016]

\* 635 computer viruses were detected among 30 PCs.
