2. Regular Reports (定期報告)

① Detection Status of Computer Virus under new system

(新システムでのコンピュータウイルス検出状況)

In July 2011, The software included “OpenCandy” function was detected. “OpenCandy” is the advertisement approach, so it isn’t the computer virus. However, “OpenCandy” has the function to deliver potentially unwanted advertisements to your computer. Moreover, for implementing the function, unexpected scan to your PC information will be done without the user agreement. Therefore, its software isn’t computer virus, but most security software judges the risky software. Then, there are many “Autorun” virus (27 detections in July). This computer virus infects to the external media, such as USB memory and HDD. At least, please check about the following easy protection for preventing the external media from the computer virus.

- Create "**Autorun.inf**" folder on the top of external media.

* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.
[Auto-Detection Total]: 2,013 (since August 2009), 413 (FY2011), +241(July and August)

* “Discovery” is the number of cases for the infected malware or false detection discovered by us.
 - In most of cases, it is the newly-discovered computer virus which cannot be detected by anti-virus software.
[Discovery Total]: 13 (since August 2009), 2 (FY2011)

* “Incident” is the number of cases of the message from external organizations, such as other departments, network center, or police.
[Incident Total]: 3 (since August 2009), 0 (FY2011)

[Status Report of detection computer virus in July 2011]

* **154 (+37) computer viruses were detected.**
