

Regular Reports of Information Processing Office

定期報告

April 26, 2012 Editor: Kitani

2. Regular Reports (定期報告)

① Detection Status of Computer Virus (コンピュータウイルス検出状況)

In March 2012, the most detected computer virus was the newly-discovered virus called “Win32/Agent.PON”. This is the Trojan horse spyware, but there is not the detail information. Second one is the “OpenCandy”. The “OpenCandy” is the advertisement approach, so it isn’t the computer virus. However, it has the function to deliver potentially unwanted advertisements to your computer. Moreover, for implementing the function, unexpected scan to your PC information will be done without user agreement. Therefore, its software isn’t a computer virus, but most security software classes it as a risk. Of course, CSEAS security software prevents these threats. Don’t forget that Viruses are constantly evolving.

* PLEASE look over the following information.

1. Create "Autorun.inf" folder on the top of removable media.

<http://www.cseas.kyoto-u.ac.jp/info/security/> (in English and Japanese)

2. Update of the computer security system

<http://www.csaes.kyoto-u.ac.jp/info/en>

“Recommendation of PC Security Check” in the Column. (in English and Japanese)

* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.

[Auto-Detection Total]: 2,732 (since August 2009), 1,132 (FY2011), 80 (March)

* “Discovery” is the number of cases for the infected malware or false detection discovered by us.

- In most of cases, it is the newly-discovered computer virus which cannot be detected by anti-virus software.

[Discovery Total]: 14 (since August 2009), 3 (FY2010), 0 (FY2011)

* “Incident” is the number of cases of the message from external organizations, such as other departments, network center, or police.

[Incident Total]: 3 (since August 2009) , 0 (FY2010-2011)

[Status Report of detection computer virus in March 2012]

* 80 computer viruses were detected among 19 PCs.
