

Malicious Detection Report

マルウェア検出報告

May 27, 2016 Editor: Kitani

Most malicious software in April 2016 was “JS/Mindspark.B”. This is the adware and the browser hijacker using Java technology. If your PC is infected, the browser data might be leaked or destroyed. Of course, it’s blocked by the Center’s security software, but please contact us if you worry.

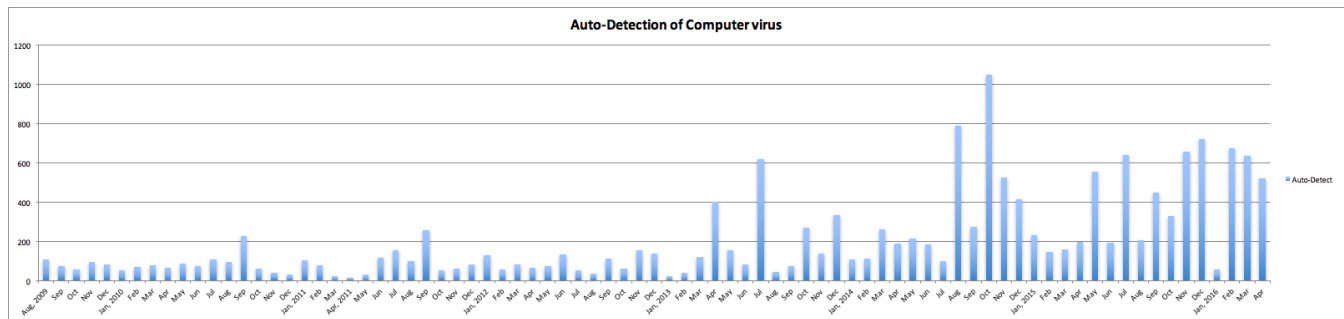

[PLEASE pay attention about Prevention Measure]

The information security risks (including the information leak) exist in various routes. The Center’s security software has been detecting most of them, but it cannot be perfect even if the highest technology and the enough cost are used. Finally, the crisis awareness of PC users is required.

At least, **PLEASE check the following prevention measures.**

1. Create "Autorun.inf" folder on the top of removable media.
2. Update of the computer security

Please see <http://www.cseas.kyoto-u.ac.jp/info/security> (in English and Japanese)

* “Auto-Detection” is the number of a malware which can be detected by our anti-virus software.

[Auto-Detection Total]: 16,439 (since August 2009)

FY	FY2009	FY2010	FY2011	FY2012	FY2013	FY2014	FY2015	FY2016
Total	607	993	1,132	998	2,598	4,275	5,315	521
AVG(day)	1.67	2.72	3.10	2.73	7.12	15.83	14.56	17.37

[Status Report of detection computer virus in April 2016]

* 521 computer viruses were detected among 26PCs.
